

65. Turner Lake stocking *111-32-10800-0010*

Turner Lake has an estimated potential adult production of 50,000 sockeye annually. USFS and ADF&G prepared an EA in 1989, but there were 7 appeals from the public. EIS preparation, and any plans for implementation of the project were stopped with ADF&G was unable to find IHN virus in the resident kokanee. Any sockeye fry planted in the lake would potentially introduce IHN to the system, and therefore ADF&G disease policy prohibits stocking.
